LAB TASK 05

Name: Hafiz Abdullah Shakeel

Sap I'D: 72405

Subject: Object Orientated Programming

Teacher: Sir Imran Khan

Task 1:

Inheritance.java × Animal.java × Dog.java ×

Source History

```java
package inheritance;
public class Inheritance {
    public static void main(String[] args) {
        Dog d = new Dog();
        d.barking();
        d.eat();
        d.sleep();
        Animal a= new Animal();
        a.eat();
        a.sleep();
    }

}
```

Inheritance.java × Animal.java × Dog.java ×

Source History

```java
package inheritance;
public class Animal {
   void eat(){
            System.out.println("eating...");
    }
        void sleep(){
            System.out.println("sleeping...");
        }
}
```

Inheritance.java × Animal.java × Dog.java ×

Source History

```java

package inheritance;

public class  Dog extends Animal {
        void barking(){
            System.out.println("barking....");
        }

}

```

Task 2:

Lab5task3.java × Clinic.java × Doctor.java ×

Source History

```java
package com.mycompany.lab5task3;
public class Lab5task3 {

    public static void main(String[] args) {
        System.out.println("Doctor's Appointment");
        Clinic c = new Clinic ();

        c.lobby();
        c.staff();
        c.patients();
        c.illnes();
        c.fever();

    }
}

```

```java
package com.mycompany.lab5task3;
public class Clinic extends Doctor {
    void lobby(){
        System.out.println("Every Clinic has somewhere place to sit");
    }
    void patients(){
        System.out.println("Affected people are called patients");
    }
    void staff(){
        System.out.println("Staff is mandatory for clinic maintance");
    }
}
```

```java
package com.mycompany.lab5task3;
public class Doctor {
    void illnes(){
        System.out.println("Ill people goes to clinics");
    }
    void fever(){
        System.out.println("fever is a sign of illnes");
    }
}
```

Task 3:

```java
package com.mycompany.lab5task2;

public class Lab5task2 {

    public static void main(String[] args) {
        Bank b =new Bank();

        b.accounts();
        b.transactions();
        b.storage();
        b.card();
    }
}

```

```java
package com.mycompany.lab5task2;

public class branch {
    void transactions (){
    System.out.println("Branch manage transactions");
}
    void card (){
    System.out.println("Branch manage card info");
}
}

```

```java
package com.mycompany.lab5task2;

public class Bank extends branch {
    void accounts (){
    System.out.println("Banks have accounts");
}
    void storage (){
    System.out.println("Banks manage storage");
}
}
```
